

MODEL	Size	Sq. Feet		
Multi-Vib	3' x 5'	15 sq/ft		
Multi-Vib	4' x 6'	24 sq/ft		
Multi-Vib	5' x 7'	35 sq/ft		

Multi-Vib® Screener

The Midwestern Industries Multi-Vib is a powerful and rugged screener. The unit is end-tensioned and utilizes vertical stratification to rapidly shear mixed-size particles into desired gradations.

Multi-Vib Construction

Midwestern's Multi-Vib high-frequency screener is constructed to handle tough-screening applications that larger screeners typically can't handle. The two counter-rotating motors create a linear motion that enables the unit to screen finer particles accurately and efficiently.

The screener is designed with a unique parallel-arc configuration found on both Midwestern's MEV® and Multi-Vib rectangular screeners. Crosspipes support the end-tensioned screens and create a flat screening surface for the material to travel. Where most other makes of rectangular screeners have a crown or an arc that pushes the material outward, the Multi-Vib utilizes the entire screen deck. This gives the screener the ability to do the job of a larger screener with a more compact design.

The end-tensioned screens used in the Multi-Vib screener allow the user to make screen changes in 10-15 minutes—reducing costly downtime. Individual screens can be replaced on each deck of the unit as needed.

Material Flow Pattern

Midwestern's Multi-Vib is able to screen finer particles due to its unique design. The linear motion created by two counter-rotating motors on top of the screener provides lift-and-throw action and the arc of the screen deck helps to convey the materials to the discharge chutes.

Unit Size and Deck Options

Multi-Vib's are available in various sizes that include: 3' x 5', 4' x 6', and 5' x 7'. The screeners also come with the choice of three-deck or five-deck units depending on your application needs.

Multi-Vib® Accessories

A variety of efficient accessories are available for the Multi-Vib Screener.

After careful testing of your material, Midwestern can pair your Multi-Vib

Screener with the right accessories that will help you achieve your desired screening results.

Ball Trays

The ball trays will reduce blinding caused by near-size plugging of the wire cloth screens. Adding ball trays to your unit can help prevent blinding in both wet or dry screening applications. Also, the secondary vibration caused by the bouncing balls against the screens helps to stratify the material for greater throughput which results in higher levels of production.

Material Distributor

Material distributors are available for wet and dry applications to ensure even distribution of material over the width of the screens. The material distributor can also be added to exisiting units. Midwestern can further customize our distributor with added options; such as heating, non-stick coatings, slide gate, and an adjustable distribution plate for fine-tuning while on-site.

Making an Informed Decision

Midwestern believes this is the best tool for our customers to make informed decisions about their screening process. The simple act of sending in material can save you time and money by purchasing the right equipment the first time.

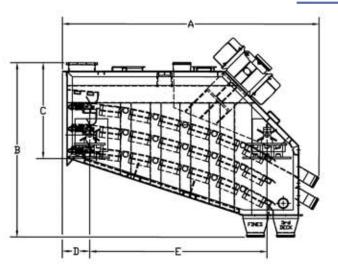

Multi-Vib® Dimensions

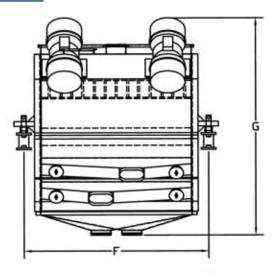

Midwestern

INDUSTRIES, INC.

The High-Frequency Multi-Vib Screener offers finer screening with higher throughput rates. The compact design competes with larger screening units by utilizing the entire screening surface.

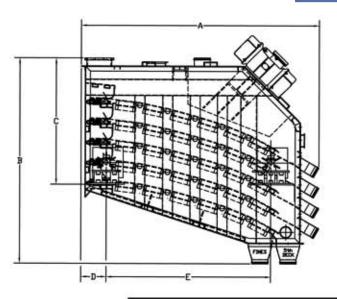

3-Deck Multi-Vib

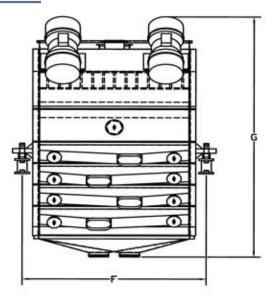

MODEL	Α	В	С	D	E	F	G
